

No-Compromise Security for the Modern Enterprise

Microsoft Cloud App Security Services by NTT DATA

Our experts can help you:

- Discover shadow IT and control risks
- Protect sensitive information
- Detect and protect against threats
- Monitor and control access in real time

Threats in constant motion

Securing today's ever-evolving enterprise from threat actors requires a multifaceted approach. The IT landscape is no longer limited to the in-house data center; its boundaries are in constant flux — always in motion and rarely residing in just one location.

Now, security must be elastic, too. It must react in a nimble fashion while protecting your organization's most valued assets — especially data — regardless of location or how it's accessed, including in the cloud.

Emerging threats to digital transformation must be addressed with modern, cloud-specific approaches. That's why a Cloud Access Security Broker (CASB) is so important.

Maximize your security posture by integrating your existing solutions with a CASB

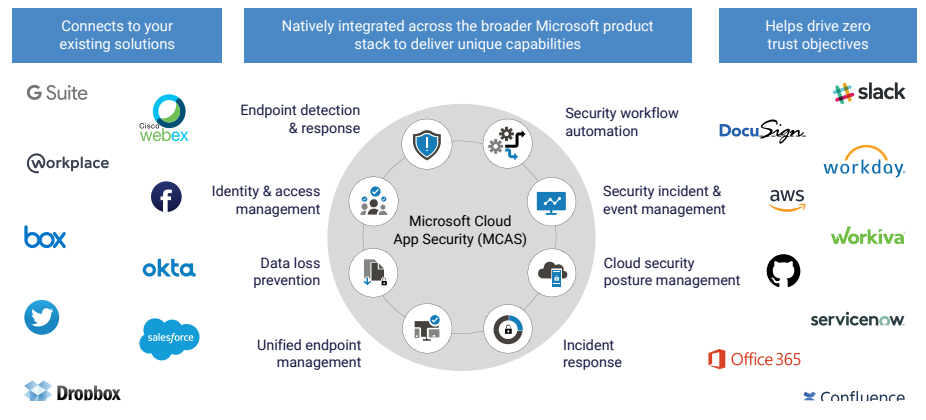

Figure 1: CASB serves as an integral element of your holistic security program

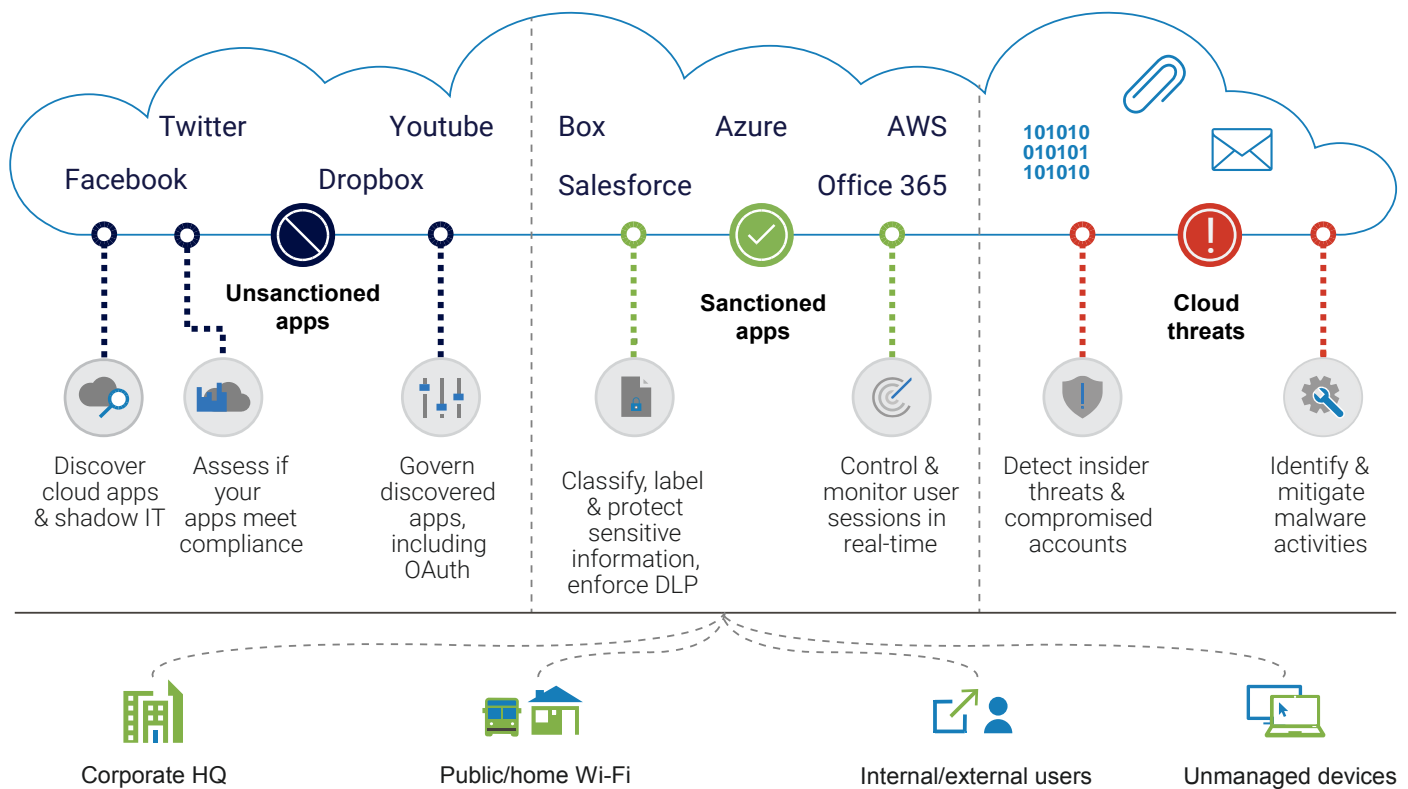

Figure 2: MCAS helps protect your organization from the inside out

Microsoft Cloud App Security (MCAS), a leading CASB solution, sits between cloud service users and software-as-a-service (SaaS) apps, monitoring all activity and enforcing security policies – serving as an integral element in a holistic security program. It acts as a central platform to enable critical functionality to protect your organization from vulnerabilities and malignant forces.

And NTT DATA can help. We combine our expertise and Zero Trust approach, which ensures secure collaboration and digital resilience, with the sophisticated features of MCAS to provide comprehensive security rooted in best practices, including:

- **Advisory:** takes a strategic approach to align MCAS with your organization’s security framework, compliance requirements and

application landscape. It enables a security posture that protects against risks, and risky behavior, through a series of workshops.

- **Implementation:** delivers against the advisory experience to ensure MCAS is deployed and configured to best practice standards. This integrates key solutions with a phased deployment approach to enable robust functionality for specific use cases to safeguard against malicious activity.
- **Managed services:** provides continual and comprehensive operational support, security posture optimization and audit support, delivered by senior cloud security engineering teams, to future-proof your organization from ever-maturing and complex threat actors.

NTT DATA – your trusted security partner

Our Microsoft Cloud App Security Services can help protect the integrity of your organization’s software-as-a-service (SaaS) applications with industry best practices, proven methodologies and exceptional cybersecurity expertise. We perform the day-to-day activities to protect your SaaS apps so your experienced internal teams can focus, with confidence, on higher value business development activities.

As a trusted and proven security partner for over 25 years, we’ve been recognized for our ability to deliver comprehensive security solutions by industry analysts, vendors, governance organizations and, most importantly, our clients.
